

BAKAR QURESHI

FULL-STACK WEB DEVELOPER

[GitHub](#) | [LinkedIn](#) | gureshimuhammadabubakar@gmail.com

SUMMARY

Software Engineering student at IIUI with hands-on experience across full-stack development and applied AI/ML. Completed Andrew Ng's Machine Learning Specialization — covering supervised & unsupervised learning, neural networks, and ML system design — and currently implementing a Vision Transformer (ViT) in a real-world project, exploring attention-based architectures for image understanding beyond traditional CNNs.

SKILLS

AI/ML: TensorFlow, Keras, PyTorch, Scikit-learn, NumPy, Pandas, Matplotlib

Languages: C++, JavaScript (ES6+), Python

Frontend: React.js, Bootstrap, HTML, CSS

Backend: Node.js, Express.js

Tools & Environments: Git & GitHub, Jupyter Notebook, VS Code, WSL, Ubuntu (Linux)

Databases: MongoDB, MySQL

Concepts: DSA, OOP, REST APIs, Authentication, Responsive UI Design, Supervised & Unsupervised Learning, Neural Networks

PROJECTS

Solar Fault Detector — PyTorch, ResNet, TorchVision, Transfer Learning, CNN

- Developed an image classification system to detect faults in solar panels across 6 fault categories.
- Leveraged a pretrained ResNet model with transfer learning and fine-tuning to overcome a limited dataset of 861 images.
- Applied data augmentation techniques to improve generalization, achieving 90%+ classification accuracy.

SMS Spam Classifier — Flask, scikit-learn, Node.js, React

- Built an end-to-end machine learning web app to classify SMS messages as spam or legitimate in real time.
- Trained a Naive Bayes classifier using scikit-learn on the Kaggle SMS Spam dataset.
- Integrated Flask API, Node.js relay, and React frontend for real-time predictions with dynamic UI feedback.
- Deployed a full-stack pipeline demonstrating seamless communication between ML and web layers.

EDUCATION

Bachelor of Science in Software Engineering

International Islamic University Islamabad

2023-Present
